SDL Support

Updating Translation Memories. A TM is updated while the user is translating or editing a document in SDL Trados Studio 2015. While a translator is translating the following update scenarios will apply: When users translate a new segment, a new translation unit (TU) gets added to the TM. When a fuzzy match is found, it will usually be edited by the user, which will also save a new TU in the TM.

Updating Translation Memories - SDL Documentation Center

SDL Trados Studio 2011 will break down a source file into segments. A segment is a manageable bite sized chunks. As these source segments are translated, they are saved to the TM. At the same time segments are being saved for new translations, the TM is also being used to leverage previously translated content.
